

SRIHARSHITHA KURRE

Role – Java Full Stack Developer (Spring Boot | React.js | JavaScript)

Contact No – +91 93814 18274 | Email ID – harshithakuree@gmail.com | Hyderabad, Telangana

SUMMARY

Java Full Stack Developer with 3 years of experience building scalable web applications using Spring Boot, React.js, and JavaScript. Proven track record: 35% faster dashboard load times, 99.9% uptime across financial microservices, and AES-256 encrypted KYC compliance pipelines. Delivered frontend for a US-based retail POS platform collaborating with distributed American engineering teams. Strong in REST API design, microservices architecture, component-driven UI, and production code review. Agile/Scrum practitioner comfortable working fully remote and asynchronously.

KEY SKILLS

Spring Boot 3.x, Spring Security, Microservices, RESTful APIs, JWT, JMS, React.js (Hooks, Redux, Context API, Axios, Router), JavaScript (ES6+), Java 8, Java 17, HTML5, CSS3, Material UI, PostgreSQL, MySQL, Hibernate, JPA, SQL Optimisation, Component Architecture, State Management, DOM Manipulation, Browser Performance, Responsive Design, Design Patterns (Strategy, Factory), HLD & LLD, Production Code Review, Debugging & Refactoring, Git, Maven, Swagger/OpenAPI, Apache Tomcat, CI/CD, Postman, JUnit, JMeter, JIRA, Agile/Scrum

ROLES AND RESPONSIBILITY

- Developing and maintaining full stack web applications using Spring Boot, React.js, and JavaScript across microservices and RESTful API layers.
- Building reusable React.js component libraries and managing application state using Redux, Context API, and React Hooks.
- Designing and consuming RESTful APIs; integrating third-party services including payment gateways, SFTP pipelines, and WebSockets.
- Implementing security-compliant data pipelines using RSA + AES-256-CBC encryption for KYC and financial applications.
- Working with PostgreSQL and MySQL — writing optimised queries, schema migrations, and ORM integration via Hibernate and JPA.
- Conducting structured code reviews, debugging production issues using Postman, JMeter, and SQL diagnostics, and following CI/CD practices via Git and Maven.
- Following Agile/Scrum methodology using JIRA; collaborating asynchronously with distributed India and US-based teams across time zones.
- Applying design patterns (Strategy, Factory) and HLD/LLD principles to build scalable, maintainable systems; quickly adapting to new technologies.

PROFESSIONAL EXPERIENCE

Company Name	Client / Project	Duration	Role
Fintech Solutions LLC, USA (Remote)	RetailEdge POS Platform	Apr 2024 – Present	Java Full Stack Developer
Transaction Analysts Pvt. Ltd.	CKYC Compliance System	Mar 2023 – Mar 2024	Full Stack Developer
Transaction Analysts Pvt. Ltd.	TA Wallet Financial App	Sep 2022 – Feb 2023	Frontend Developer Intern

Fintech Solutions LLC, USA (Remote)

Project Name : RetailEdge – US Retail Point-of-Sale & Inventory Management Platform

Team Size : 7 (distributed across US & India)

Technologies : React.js, TypeScript, Redux Toolkit, Node.js, REST APIs, PostgreSQL, AWS S3 / Amplify, Jest, Material UI, GitHub Actions, JIRA

- Built and owned the React.js + TypeScript frontend for a real-time POS dashboard used by US retail chains, handling 50,000+ daily transactions across multiple store locations.
- Implemented Redux Toolkit global state for cart, inventory, and user session flows — reducing component re-renders by ~40% through memoisation and selector optimisation.
- Designed a live inventory module with WebSocket-driven updates, enabling store managers to track stock in real time without page refresh.
- Collaborated asynchronously with US-based backend and QA engineers across EST/PST time zones; communicated via JIRA, GitHub PRs, and Slack standups.
- Integrated Stripe payment gateway API for in-store card processing, handling refunds, partial payments, and multi-state tax calculations.
- Wrote Jest + React Testing Library unit and integration tests achieving 85% code coverage across all critical UI flows.
- Set up GitHub Actions CI/CD pipeline for automated build, lint, test, and deploy to AWS Amplify — reducing manual deployment effort by 60%.
- Conducted structured code reviews; enforced component architecture guidelines and WCAG 2.1 AA accessibility standards across the team.

Transaction Analysts Pvt. Ltd. — CKYC Compliance & Verification System

Project Name : CKYC – KYC Compliance Platform

Team Size : 8

Technologies : React.js, TypeScript, Spring Boot, PostgreSQL, AES-256 / RSA, SFTP, Maven, Apache Tomcat, Postman

- Reviewed and debugged production-level frontend code for a compliance platform — evaluating component logic, state management, and UI rendering for correctness and efficiency.
- Architected a reusable React.js component library for the CKYC dashboard; delivered real-time SFTP-driven KYC status updates using WebSocket polling and optimised DOM manipulation.
- Applied Strategy and Factory design patterns across microservices, reducing code duplication by ~30% and improving long-term scalability.
- Developed a dual-layer encryption module (RSA + AES-256-CBC) achieving 100% encryption coverage with zero data loss across 1,000 KYC records per SFTP batch — fully compliant with RBI security standards.
- Translated complex regulatory requirements into clean frontend interfaces; collaborated asynchronously with distributed backend engineers following detailed technical guidelines.
- Led structured code reviews identifying logic gaps, inefficiencies, and scalability risks before every production deployment.

Transaction Analysts Pvt. Ltd. — TA Wallet Financial Application

Project Name : TA Wallet – Full Stack Digital Financial Platform

Team Size : 8

Technologies : React.js, Redux, TypeScript, Spring Boot, PostgreSQL, REST APIs, JMeter, Postman, Maven

- Built React.js + Redux transaction dashboards with rigorous focus on browser performance, state management correctness, and scalable component architecture — achieving ~35% reduction in frontend load times.
- Evaluated and integrated two independent payment gateway APIs; maintained average API response time under 1.5 seconds with zero reported security incidents since go-live.
- Designed cross-browser-compatible interfaces supporting 10,000+ wallet records; ensured optimal DOM performance and rendering consistency across all major browsers.
- Maintained 99.9% production uptime across financial microservices handling 500+ daily transactions.
- Conducted structured written code reviews for production-level frontend and backend code across Agile sprint cycles.

- Debugged complex frontend and API issues using root-cause analysis and SQL diagnostics; resolved production defects independently in a fully remote team environment.

Transaction Analysts Pvt. Ltd. — MeeSeva App (QA & Technical Review)

Project Name : MeeSeva – Government Digital Services Portal

Team Size : 6

Technologies : Manual Testing, SQL, Postman, JIRA, Agile/Scrum

- Executed comprehensive manual test plans and technical reviews across multiple service modules; caught critical defects pre-production through detailed, structured written feedback.
- Resolved payment failures using targeted SQL diagnostics and root-cause analysis; worked independently and asynchronously across Agile sprint cycles.

EDUCATION

B.Tech – Electronics & Communication Engineering | CGPA: 7.9 / 10 | Jun 2022

Malla Reddy Engineering College for Women, Hyderabad

Class XII — Narayana Junior College, Hyderabad | CGPA: 9.2 / 10 | May 2018

CERTIFICATIONS & KEY ACHIEVEMENTS

- Java Full Stack Development – Udemy (Spring Boot, Microservices, React.js, REST APIs)
- Spring Boot & Microservices Certification – Coursera / Udemy
- Python – E-commerce Website Development | Digital Lync
- UX Design Fundamentals (UX 4G) | UI Workshop
- Delivered 35% frontend load time improvement through browser performance optimisation and component architecture refactoring.
- Led RSA + AES-256 encrypted CKYC compliance system delivery with zero data loss — recognised for attention to detail and independent problem-solving.
- Maintained 99.9% uptime across financial microservices under production conditions.
- Delivered a complete US-based retail POS frontend independently, collaborating across EST/PST time zones with distributed American engineering teams.
